Lamination of cast polyester resin and concrete slabs - using partially
immersed particles for interfacial keys

Patent Assignee: MONTANDON L (MONT-I)

Inventor: MONTANDON L

Number of Countries: 001 Number of Patents: 001

Patent Family:

Priority Applications (No Type Date): CH 765365 A 19760428

Abstract (Basic): CH 606685 A

The interface between cast layers of concrete and of a polyester resin material is keyed by use of granular particles which are partially immersed in the resin surface and project into the zone to be filled with cast concrete.

Used for prefabrication of composite slabs of e.g. polyester faced reinforced concrete for building or cladding silos, docks etc. The component layers may be solid or hollow, opt. may feature assembly holes or projecting tie bars. The interfacial bond is substantially mechanically without involving expensive materials, equipment or lab-out.
